Databases: MongoDB, MySQL.

Miscellaneous: HTML, CSS, Node.js, GitHub, Redux, Formik, VS Code, Postman.

PROJECTS

Dial a Meal

(MERN STACK)

- The project aims to develop a comprehensive and user-friendly web application that offers tin services with customizable meal plans. The platform will allow users to choose from various pre-defined meal plans (such as daily, weekly, or monthly) and provide the exibility to customize their own meal plan.

GoFood

(MERN STACK)

- GoFood is a full-stack food ordering application built with the MERN stack. It features user authentication, food search, categorized listings, and a cart system where users can customize quantity and size before placing orders. The app ensures seamless browsing and ordering experience with efficient backend integration

ArchiCraft

(React and Firebase)

- ArchiCraft is a web-based platform in which a user can register and login himself for the purpose of requesting some architectural design and then the admin can accept the request with the price for it and then after the payment by the client, admin can send design to client.
